

BRAKE UPGRADES

STEP UP MOUNTS

The quickest way to increase the power of any brake is to increase the disc size.

International Standard

We offer two mounts for international standard fittings.

HBIS20 – this mount lifts the caliper allowing you to fit a 20mm larger disc.

HBIS40 – this mount lifts the caliper allowing you to fit a 40mm larger disc.

74mm Post mount

HBSM20H – this mount allows international standard calipers to fit onto 74mm post mount forks, but it also requires a 20mm larger disc. NOTE: Will not work with most post mount Marzocchi forks.

Post mount calipers

All our calipers are now available in the 9.74 post mount style (except trials) the range of brackets (below) can be used on the whole range to fit most mounts (note: there are some exceptions, and some brackets can be used for purposes that we have not stated to give certain rotor sizes. We have designed the brackets only for the purpose stated) All mounts are supplied with bolts for mounting to frame/fork.

A	<p>For MonoMini ONLY</p>
<p>IS Front to Postmount - 160mm disc IS Rear to Postmount - 140mm disc</p>	
B	
<p>IS Front to Postmount - 203mm disc IS Rear to Postmount - 183mm disc</p>
